

#### PRODUCT MANUAL FOR SODIUM BENZOATE, FOOD GRADE ACCORDING TO IS 4447: 1994

This Product Manual shall be used as reference material by all Regional/Branch Offices & licensees to ensure coherence of practice and transparency in operation of certification under Scheme-I of Bureau of Indian Standards (Conformity Assessment) Regulations, 2018 for various products. The document may also be used by prospective applicants desirous of obtaining BIS certification licence/certificate.

1.	Product	:	: IS 4447 : 1994				
	Title	:	SODIUM BENZOATE, FOOD GRADE				
	No. of Amendments	:	: 03				
2.	Sampling Guidelines:						
a)	Raw material	:	No specific requirements				
b)	Grouping guidelines	:	NA				
c)	Sample Size	:	200g				
3.	<b>List of Test Equipment</b>	:	Please refer Annex – A				
4.	Scheme of Inspection and		Please refer Annex – B				
→.	Testing	•					
5.	Possible tests in a day:						
	i. Description						
	ii. Reaction with Ferric chloride						
	iii. Reaction with uranyl zinc acetate						
	iv. Flame test						
	v. Melting range of precipitate with hydrochloric acid						
	vi. Purity						
	vii. Moisture						
	viii. Acidity or alkalinity						
	ix. Readily carbonizable substances						
	x. Readily oxidizable substance						
	xi. Chlorinated organic compounds						
	xii. Arsenic						
	xiii. Heavy metals (as Pb)						
	xiv. Lead						
6.	Scope of the Licence :						
	"Licence is granted to use Standard Mark as per IS 4447: 1994 with the following scope						
	Name of the product Sodium Benzoate, Food Grade						

#### ManakBhawan, 9, Bahadur Shah ZafarMarg, New Delhi – 110002

# ANNEX-A TO PRODUCT MANUAL FOR SODIUM BENZOATE, FOOD GRADE ACCORDING TO IS 4447: 1994

## LIST OF TEST EQUIPMENTS

## Major test equipment required to test as per the Indian Standard

Sl	Tests used in with Clause Reference	Test Equipment
No.		
1	Description	Water, Ethanol (95 %)
	Cl. 3.1	
2	Identification,	Ferric Chloride solution, water
	Reaction with ferric chloride	
	Cl. 3.2.1	
3	Reaction with uranyl zinc Acetate	Uranyl zinc acetate, Acetic acid, water, weighing
	Cl. 3.2.2.1	balance, measuring beaker/ cylinder.
4	Flame Test	Flame test apparatus
	Cl. 3.2.2.2	
5	Melting range of Precipitate	Hydrochloric acid, measuring beaker/ cylinder,
	with Hydrochloric acid	water, distilled water, capillary tube (wall
	C1. 3.2.2.3	thickness 0.10 to 0.15 mm) internal diameter (0.9
		to 1.1 mm), melting point apparatus with paraffin
		or silicone oil) and a stirring device fitted with
		auxillary thermometer, vacuum dessicator,
		sulphuric acid.
6	Purity	Hydrochloric acid-0.1 N, standard hydroxide
	Cl. 3.3 and Table 1	solution- 0.5 N, Phenolphthalein indicator,
	(Annex B of IS 4447)	Weighing balance (L.C- 1 mg), Measuring
		beaker/ cylinder. Ether, Bromophenol Blue,
7	Maistura	Titration equipment, water.
7	Moisture	Oven (capable of maintaining 105+- 1°C), weighing bottle, weighing balance (L.C- 1 mg)
	Cl. 3.3 and Table 1	weighing bottle, weighing balance (L.C- 1 mg)
	(Annex D of IS 4447)	
8	Acidity or Alkalinity	Standard sodium hydroxide, Hydrochloric acid,
	Cl. 3.3 and Table 1	Phenolphthalein Indicator, weighing balance,
	(Annex E of IS 4447)	boiled water, measuring beaker/cylinder.
9	Readily Carbonizable Substances	Sulphuric acid, Cobalt chloride solution, Ferric
		chloride solution, Cupric sulphate, water,

	Cl. 3.3 and Table 1	measuring beaker/cylinder, weighing balance				
	(Annex F of IS 4447)	(L.C- 1 mg), water, potassium iodide, Titration				
		apparatus.				
10	Readily oxidizable substances	Sulphuric acid, standard potassium permanganate				
	Cl. 3.3 and Table 1	solution, measuring cylinder/ beaker, water,				
	(Annex G of IS 4447)	heater for boiling, weighing balance.				
11	Chlorinated organic compounds	Concentrated nitric acid, calcium carbonate,				
	Cl. 3.3 and Table 1	dilute nitric acid, measuring cylinder/ beaker,				
	(Annex H of IS 4447)	silver nitrite solution, standard hydrochloric acid, weighing balance, heater.				
12	Arsenic	Instrument method: Kjeldahl flask, Atomic				
	and	absorption spectrophotometer, hydrochloric acid,				
	Lead	water, sodium sulphate, sodium borohydride				
	Cl. 3.3 and Table 1	pellets, potassium chloride, measuring cylinder/				
	(Cl 15 of 1699)	beaker, volumetric flask, weiging balance, heater.				
		Chemical method: For Lead;				
		Nitric acid, sulphuric acid, ammonium acetate-				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution,				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution,				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.				
		Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.  For Arsenic: Distillation apparatus, conical flask,				
		Nitric acid, sulphuric acid, ammonium acetatecitrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.  For Arsenic: Distillation apparatus, conical flask, sulphuric acid, potassium permanganate solution, ferrous sulphate, Hydrochloric acid, potassium bromine solution, aluminium stripes, tin chloride				
		Nitric acid, sulphuric acid, ammonium acetatecitrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.  For Arsenic: Distillation apparatus, conical flask, sulphuric acid, potassium permanganate solution, ferrous sulphate, Hydrochloric acid, potassium bromine solution, aluminium stripes, tin chloride solution, test paper.				
13	Heavy Metal (as Pb)	Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.  For Arsenic: Distillation apparatus, conical flask, sulphuric acid, potassium permanganate solution, ferrous sulphate, Hydrochloric acid, potassium bromine solution, aluminium stripes, tin chloride solution, test paper.  Ammonium solution, acetic acid solution,				
13	Cl. 3.3 and Table 1	Nitric acid, sulphuric acid, ammonium acetatecitrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.  For Arsenic: Distillation apparatus, conical flask, sulphuric acid, potassium permanganate solution, ferrous sulphate, Hydrochloric acid, potassium bromine solution, aluminium stripes, tin chloride solution, test paper.  Ammonium solution, acetic acid solution, standard lead solution, lead nitrate stock solution,				
13	` '	Nitric acid, sulphuric acid, ammonium acetate- citrate solution, ammonium solution, carbon tetrachloride, ammonium hydroxide, potassium cyanide, hydroxylamine hydrochloride solution, duluzone solution, buffer pH 2.  For Arsenic: Distillation apparatus, conical flask, sulphuric acid, potassium permanganate solution, ferrous sulphate, Hydrochloric acid, potassium bromine solution, aluminium stripes, tin chloride solution, test paper.  Ammonium solution, acetic acid solution,				

The above list is indicative only and may not be treated as exhaustive

# ANNEX B SCHEME OF INSPECTION AND TESTING FOR SODIUM BENZOATE, FOOD GRADE ACCORDING TO IS 4447: 1994

- 1. LABORATORY- A laboratory shall be maintained which shall be suitably equipped (as per the requirement given in column 2 of Table 1) and staffed, where different tests given in the specification shall be carried out in accordance with the methods given in the specification.
- 1.1 The manufacturer shall prepare a calibration plan for the test equipment.
- **2. TEST RECORDS** The manufacturer shall maintain test records for the tests carried out to establish conformity.
- 3. PACKING AND MARKING-The Standard Mark as given in Schedule of the licence shall be stenciled/printed on each container of **Sodium Benzoate**, **Food Grade** or printed on the labels applied to the container, as the case may be, provided always that the material in each container to which this mark is thus applied conforms to every requirement of the specification.
- **3.1 Packing -** The material shall be filled in amber coloured glass containers, or any other well-closed containers, or suitable bag with inner lining of food grade material, with as little air space as possible. The containers shall be such as to preclude contamination of the contents with metals or other impurities.
- 3.1.1 For ECO mark the material used for product packaging shall be recyclable or biodegradable.
- 3.2 Marking Each container shall be legibly and indelibly marked with the information mentioned under clause 4.2.1 of IS 4447. In addition, the following details shall be mentioned on each container legibly and indelibly:
  - a) BIS Licence No. CM/L .
  - b) BIS website details i.e "For details of BIS Certification please visit www.bis.gov.in".
- 3.2.1 Additional information as per clause 4.2.3 shall be marked on the label for ECO mark.
- 4 **Control unit** For the purpose of this scheme, Sodium benzoate, Food Grade produced in a reaction vessel and dried at a time shall constitute a control unit.
- 5 **LEVELS OF CONTROL** The tests and as indicated in Table 1 and at the levels of control specified therein, shall be carried out on the entire production of the factory covered by this scheme and appropriate records and charts maintained in accordance with paragraph 2 above.

- 5.2 All the production which conforms to the Indian Standard and covered by this licence shall be marked with the Standard Mark.
- 5.3 A sample drawn from a control unit of material and tested, shall conform to all the requirements laid down in the specification. In the event of failure of the sample in one or more of the requirements, the entire material in the control unit shall be either reprocessed for rectifying the defect or else rejected. Such reprocessed material when tested again shall conform to all requirement of the specification.
- 6 **ECO Mark** -The requirements for ECO Mark as stipulated under clause 3.4 of IS 4447 shall be implemented by the licensee holding licence for ECO Mark, which will be in addition to the product requirements
- **7. REJECTION-** Disposal of non-conforming product shall be done in such a way so as to ensure that there is no violation of provisions of BIS Act, 2016.

TABLE 1 LEVELS OF CONTROL

(1) Test Details				(2)	(3) Levels of Control			
				Test equipment				
Clause	Requirements	Test Method Cl. Ref.	Test Method IS	requirement R:required (or) S: Sub- contracting permitted	No. of Samples	Frequency	Remarks	
3.1	Description	3.1	IS 4447	R	One sample	Each control unit	Before drawing the	
3.2	Identification a) Reaction with ferric chloride	3.2.1	IS 4447	R	-do-	-do-	sample the entire dried Sodium benzoate or one control unit shall be thoroughly mixed. Samples shall then be drawn from different parts of the control unit & then mixed thoroughly again for making a composite sample for using it for analysis for various parameters of the ISS.	
3.2.2	Test for Sodium  a) Reaction with uranyl zinc acetate b) Flame Test c) Melting range of Precipitate with Hydrochloric acid	Annex A 3.2.2.2 Annex C	IS 4447 -do- -do-	R R R	-do-	-do-
