

PRODUCT MANUAL FOR SUPERSULPHATED CEMENT ACCORDING TO IS 6909: 1990

This Product Manual shall be used as reference material by all Regional/Branch Offices & licensees to ensure coherence of practice and transparency in operation of certification under Scheme-I of Bureau of Indian Standards (Conformity Assessment) Regulations, 2018 for various products. The document may also be used by prospective applicants desirous of obtaining BIS certification licence/certificate.

1.	Product	:	IS 6909 : 1990
	Title	:	SUPERSULPHATED CEMENT
	No. of Amendments	:	5
2.	Sampling Guidelines:		
a)	Raw material	:	As per clause 4 of IS 6909 : 1990
b)	Grouping guidelines	:	Not applicable
c)	Sample Size	:	For physical tests – 8 kg For chemical test – 1 kg
3.	List of Test Equipment	:	Please refer ANNEX – A
4.	Scheme of Inspection and Testing	:	Please refer ANNEX – B
5.	Possible tests in a day :		
	(i) Chemical requirement (Clause 5.1)		
	(ii) Fineness (Clause 6.1)		
	(iii) Setting time (Clause 6.3)		
6.	Scope of the Licence :		
	“Licence is granted to use Standard Mark as per IS 6909 : 1990 with the following scope:		
	Name of the product	SUPERSULPHATED CEMENT	

ANNEX AList of Test Equipment*Major test equipment required to test as per the Indian Standard*

Sl No.	Tests used in with Clause Reference	Test equipment
1	Fineness Clause 6.1	Blaine's apparatus variable flow type
		Stop watch
		Mercury
		Balance, Standard weights
		Standard Cement
		Manometer liquid (di-butyl phthalate or light mineral oil.)
		Mercury of reagent grade or better, Pyknometer
		Circular discs of filter paper of medium porosity (mean pore diameter 7 μ).
		Le-Chatelier's flask
		Constant temperature water bath to maintain temperature within ± 0.1 ° C
2	Soundness by Le-chatelier Method Clause 6.2	Le-Chatelier's water bath preferably with thermostatic control to maintain temperature from 27 ± 2^0 C
		Le-Chatelier's moulds with weights and cover glasses minimum 8 nos.
		Humidity chamber with temperature & RH control 27 ± 2^0 C, RH 90 to 100 %
		Steel scale
4	Setting time Clause 6.3	Vicat apparatus
		Needles
		Moulds
		Stop Watch
		Balance - 1000g ± 0.1 g and Standard Weights 1mg to 500 gm
		Gauging trowel of weight 210 ± 10 g
5	Compressive Strength Clause 6.4	Vibration machine with timer & cube mould fitting assembly 12000 ± 400 vibration per min.
		Compressive Strength machine
		Poking Rod , Petroleum Jelly

		Proving ring with all accessories suitable for calibration of CST machine
		Tachometer
		Cube Moulds 70.6 × 70.6 mm, Poking rod
		Gauging trowel (210 ± 10 g) gauging plate, stainless steel(non-perforated)
		Standard sand grade 1, 2 and 3 (as per IS 650)
		Curing tank of appropriate size with water circulation arrangement
		Graduated glass cylinders 150 to 200 ml
		Humidity chamber with temperature & RH Control 27 ± 2° C, RH 90 to 100 %
6	Transverse Strength Test Clause 6.5	Moulds
		Planetary Mixer, Standard Sand
		Jolting Apparatus, Scraper, Demoulding device as per IS 4031 (Part 8)
7	General equipments for Cement testing	
a)	To control humidity & temperature in lab	1. Humidity chamber with temperature & RH control 27 ± 2°C, RH 90 to 100 % 2. Suitable arrangement to demonstrate maintenance of temperature of 27 ± 2 ° C & RH 65 ± 5% constantly
b)	For cement Sampling	Mixing trays –adequate size including trays of 24 partitions for keeping hourly samples
c)	To control the residue of cement	Sieves of size (300, 212, 150, 90, 75 & 45µ)
d)	To measure temperature	Thermometers
e)	Lab ball mill (motorized)	To grind the clinker, slag & gypsum sample in lab ball mill for testing
f)	To weigh the material	1. Platform type balance 2. Electrical balance 3 Weight box with weights (1 mg - 500 g)
8	General test equipments for chemical testing Clause 4.1 , IS 6909 : 1990	
		Muffle Furnace with thermostatic control, Range 0 – 1200° C
		Oven with thermostatic control 0-300° C
		Heater and hot plate
		Distillation Assembly

		Crucible: Platinum or Porcelain / silica
		Filter paper (no 1,40,41,42)
		Desiccators with cover & Desiccant
		Water bath
		pH meter/paper
		Glass wares - volumetric flask -0-250 ml, beaker 0-250 ml, measuring cylinder 0-50, 100, 500, 1000 ml, burette 0-25/50 ml, conical flasks- 0-250 ml, pipette 0-5,10, 25, 50 ml
		All chemicals required for complete chemical analysis of cement
		Tongs including platinum tipped tong
		Wire gauge with asbestos sheet at the middle
		Washing bottle
		Mortar mixer- 4.75 l Glass thermometer
		All required chemicals as per IS 4032 for Supersulphated cement, Ordinary portland cement and Portland clinker testing.
9	Granulated Slag Clause 4.1 and IS 12089	<ul style="list-style-type: none"> a) Glass Content <ul style="list-style-type: none"> - Optical microscope min 100 X - Bromoform b) Chemical requirement <ul style="list-style-type: none"> - As per IS 4032

The above list is indicative only and may not be treated as exhaustive.

ANNEX B**SCHEME OF INSPECTION AND TESTING**

1. LABORATORY - A laboratory shall be maintained which shall be suitably equipped (as per the requirement given in column 2 of Table 1) and staffed, where different tests given in the specification shall be carried out in accordance with the methods given in the specification.

1.1 The manufacturer shall prepare a calibration plan for the test equipments. The following equipments shall be calibrated at a frequency shown against each and records kept.

Sl. No.	TEST EQUIPMENT	FREQUENCY OF CALIBRATION
1.	Blaine's apparatus	Daily with licensee's own Standard cement sample and monthly with standard cement samples supplied by NCCBM.
2.	Compressive strength Testing machine	Once in a month with Licensee's own Proving Ring and the Proving Ring shall be Calibrated once in two years from a NPL/NABL Accredited Calibrating body or NPL or NPL accredited Proving Ring manufacturer.
3.	Autoclave pressure gauge	Once in a month by licensee's own dead weight pressure gauge tester OR once in six months from accredited calibrating body or NPL/NABL accredited manufacturer of such gauges.
4.	Vibration machine	Once in a month by licensee's own Tachometer. The tachometer shall be calibrated once in a year from NPL/NABL accredited outside agency.
5.	Dead weight pressure gauge Tester (if available)	Once in four years from NABL accredited Tester (if available) Lab or OEM (original Equipment manufacturer) having NPL/NABL accredited calibrator.

2. TEST RECORDS – The manufacturer shall maintain test records in various formats, Form 1 to Form 16 for the tests carried out to establish conformity.

3. LABELLING AND MARKING – Labeling and marking shall be as given below:

3.1 STANDARD MARK - The Standard Mark, as specified by BIS, shall be printed or stenciled on each bag or drum of Supersulphated Cement or on the label applied to it, provided the material in each bag or package to which the mark thus applied conforms to the specification. The size of the Standard Mark shall be either **160 x 120 mm** or **80 x 60 mm** for packing in quantity of 50 kg and above. For other packing of lower quantity, a photographic reduction is permitted.

3.2 MARKING - As per the requirements of IS 6909: 1990.

3.2.1 In addition to above, following marking shall also be marked:

a) Name of original manufacturer of cement with BIS licence number in case of repacking unit.

b) Any other marking required under provisions of Legal Metrology Act, 2009 and Legal Metrology (Packaged Commodities) Rules, 2011 framed thereunder.

3.2.2 All the information including BIS Standard Mark except Manufacturers Registered Trade Mark shall be applied on each bag in **BLACK COLOUR**.

Note:

1. For each calendar year, the first week shall be counted as 7 days from 1st of January and subsequent weeks numbered serially accordingly. The bags shall be marked as W 01/MM/YY..... W 51/MM/YY..... etc.
2. Label mentioned at 3.1 and 3.2 above shall be attached to the seal of the container. The seal shall be of such a design that it shall automatically get destroyed on opening.
3. The colour of the bag and background colours should be in contrast to the colour of the Standard Mark and the details so that the markings are conspicuous.

4. CONTROL UNIT –

4.1 For manufacturing units of Supersulphated Cement: The tests, as indicated in Table 1 attached and at the levels of control specified therein, shall be carried out on the whole production of the factory which is covered by this scheme and appropriate records maintained in accordance with clause 2 above.

4.2 For packing of Supersulphated Cement at bulk cement terminal: The tests, as indicated in Table 2 attached and at the levels of control specified therein, shall be carried out on the whole packing of Supersulphated Cement and appropriate records maintained in accordance with clause 2 above.

4.2.1 For bulk packing units as per clause 4.2, all cement of one consignment received shall constitute one batch.

4.2.2 Batch mixing may be permitted for packing units, which are extended packing terminals of the same cement manufacturer (licensee) subject to packing units obtaining test certificates from the manufacturer and keeping proper records. If the cement is received from different units of the same manufacturer (different licensees) batch mixing of cement is not permitted. The Batch integrity shall be ensured at all stages of packing and the packer shall maintain appropriate controls and checks to ensure that there is no chance of mix up of different batches. Adequate care shall be taken to avoid spoilage during handling, packing and storage.

4.2.3 If bulk packing unit is instructed by BIS for suspension of licence due to the failure of the samples, such instruction will automatically apply to the original manufacturer of the cement, as per relevant suspension of licence guidelines. An undertaking to this effect shall be obtained from the bulk packers and the original cement manufacturer.

4.2.4 Test Certificate of each original batch of cement shall be obtained from the supplier and test results recorded. On the basis of tests and inspection, the decision regarding conformity or otherwise of the consignment/batch to a given requirement shall be taken.

4.3 WEIGHMENT – One filled bag from each nozzle shall be taken at random twice in each shift of operation and weight checked in case of electronic packers with recorders. In all other cases one filled bag from each nozzle shall be checked once in two hours. The records shall be maintained in Form 1. The bag shall be so chosen for weighment such that bags from each nozzle are taken for weighment. The weighing and packing machines shall be adjusted as and when necessary in such a way that net quantity of each bag shall be in accordance with the

tolerances given in Annex B and clause 8.2 of IS 6909 : 1990. Such adjustments for each nozzle shall be recorded in Form 1 under remarks column.

4.3.1 For packing of Supersulphated Cement in bulk cement terminal weighment of hourly check of mass of drums also shall be done in addition to weighment of bags mentioned in para 4.3 above. The records of weighments shall be maintained in Forms 8 and 10.

4.4 RAW MATERIALS

4.4.1 Routine analysis of various raw materials used in the manufacture of Supersulphated Cement shall be made at intervals of a month or whenever there is a change in the source/mine area stratification whichever is earlier and appropriate records of the analysis and of the Physical composition of the mixtures shall be maintained in Form 2. This analysis is not applicable for Packing Units of Supersulphated Cement at bulk cement terminal.

4.5. PACKING - The Cement shall be packed in bags as specified in clause 8.1 of IS 6909 : 1990. A test certificate either from the manufacturer or from any recognized testing laboratory shall be received along with each consignment of bags. Alternatively the samples of bags from each consignment shall be tested by the cement manufacturer either in his own laboratory or any other BIS recognized laboratory before they are used for packing cement. No testing would be necessary if the bags carry BIS Certification Mark. The bag shall be in good condition at the time of packing.

5. LEVELS OF CONTROL - The tests as indicated in column 1 of Table 1 and the levels of control in column 3 of Table 1, shall be carried out on the whole production of the factory which is covered by this plan and appropriate records maintained in accordance with clause 2 above.

5.1. PRODUCTION DATA - The licensee shall send to BIS a statement of quantity produced, marked and exported by him and the value thereof at the end of each quarter of the operative period as per the enclosed proforma and shall also submit these details to BIS at the end of the operative year duly authenticated by a Chartered Accountant.

6. REJECTIONS – Disposal of non-conforming product shall be done in such a way so as to ensure that there is no violation of provisions of BIS Act, 2016.

Table 1 – Levels of Control (Grinding/Packing Unit)

(1)				(2)	(3)			
TEST DETAILS				Test equipment requirement R: required (or) S: Sub-contracting permitted	RECOMMENDED LEVELS OF CONTROL			
Clause	Requirement	Test Methods Clause Reference			Number of sample	Frequency		Remark
						Cement Grinding/Blending	Cement Packing	
4.1	Granulated Slag	4.1 5.1	IS 6909 IS 12089	R	One	One sample shall be tested from each supplier once in a month.		
4.1	Clinker	4.	IS 6909 IS 16353	R	One	Daily composite sample shall be tested for complete requirement as per IS 16353. No further testing required if accompanied with test certificate or ISI marked.		
4.1	Ordinary Portland Cement	4.1	IS 6909 IS 269	-	-	OPC shall be ISI marked and shall be accompanied with manufacturer certificate. If OPC is produced in the same factory, records as per relevant SIT shall be maintained.		
5.1	Chemical Requirement							
i)	Insoluble residue	5.1	IS 6909 IS 4032	R	One	Daily Composite sample	Weekly composite sample	-
ii)	Magnesium oxide	5.1	IS 6909 IS 4032	R	One	Daily Composite sample	Weekly composite sample	-
iii)	Sulphuric anhydride (SO ₃)	5.1	IS 6909 IS 4032	R	One	Daily Composite sample	Weekly composite sample	-
iv)	Sulphide Sulphur	5.1	IS 6909 IS 4032	R	One	Daily Composite sample	Weekly composite sample	-
v)	Chloride Content	5.1	IS 6909 IS 12423	R	One	-	Weekly composite sample	This test shall also be carried out whenever there is any change in source of any raw material.

6	Physical Requirement							
6.1	Fineness	6.1	IS 6909 IS 4031 (Part 2)	R	One	1. Every alternate hourly from each mill separately. 2. Daily Composite sample	Daily Composite sample	-
6.2	Soundness (Cold expansion)	6.2	IS 6909 IS 4031 (Part 3)	R	One	Daily Composite sample	Daily Composite sample	-
6.3	Setting Time	6.3	IS 6909 IS 4031 (Part 5)	R	One	One sample per shift (Composite sample)	Daily Composite sample	-
6.4	Compressive strength	6.4 & 6.6	IS 6909 IS 4031 (Part 6)	R	One	Daily Composite sample	Daily Composite sample	-
6.5	Transverse strength (Optional)	6.5 & 6.6	IS 6909 IS 4031 (Part 8)	S	One	Weekly composite sample	Weekly composite sample	-

NOTES:

- Composite sample shall be made out of hourly samples for the required period (Pl see IS 3535 Methods of sampling hydraulic cements).
If cement is manufactured using same proportion of raw materials from more than one cement mill, sample from each mill shall be tested for fineness as per the above table. For all other parameters composite samples from all the mills shall be tested.
If cement is manufactured using different proportion of raw materials from more than one cement mill, sample from each mill shall be tested for all requirements as per the above table.
- For manufacturing units where there is no packing silo and cement is packed directly from cement grinding, frequency of tests specified for cement grinding stage would apply for various tests to be carried out on samples taken from cement mill spouts along with weekly chloride content test.
- Sub-contracting is permitted to a laboratory recognized by the Bureau or Government laboratories empaneled by the Bureau.
- The control unit and levels of control as decided by the Bureau are obligatory to which the licensee shall comply with.

Table 2 Level of Control (Bulk Packing Unit)

(1)				(2)	(3)
